COVER LETTER

Dear Hiring Team,

I am currently pursuing a Master's degree in Artificial Intelligence at BTU Cottbus and would like to apply for the Working Student role focused on AI agents and digital process automation.

My background combines machine learning with hands-on experience in building automation workflows and integrating AI tools into practical systems. Recently, I developed an email automation solution using n8n, where I designed workflows to process incoming emails, apply conditional logic, and generate automated responses using LLM APIs. This project strengthened my understanding of building and maintaining automated pipelines, working with APIs, and improving efficiency in communication processes.

I am particularly interested in developing AI-driven agents and automations that enhance speed, accuracy, and scalability. I enjoy experimenting with tools such as OpenAI-based models, workflow platforms like n8n, and integrating services through APIs, webhooks, and structured data flows. I am comfortable learning new tools like Zapier or Make quickly and applying them to real-world use cases.

I work in a structured and solution-oriented way, focusing on breaking down problems, testing ideas iteratively, and optimizing systems for better performance. I am confident working independently and take ownership of improving processes, while also collaborating effectively with teams.

I am motivated by the opportunity to contribute to building efficient AI-powered workflows, especially in areas such as PR and communication where automation can significantly improve productivity and consistency. I am fluent in English and currently improving my German skills.

Thank you for your time and consideration. I look forward to the opportunity to contribute to your team and support your next phase of growth with AI-driven solutions.

Kind regards,
Jay Khakhar
